Outline

- Introduction
- Methodology
- Project Life Cycle
- Selected Sub-Projects since Feb 2002
 - Lognotes
 - Brahms Modeling
 - Workit
- Design Iteration
- Conclusion
- List of Publications and Presentations

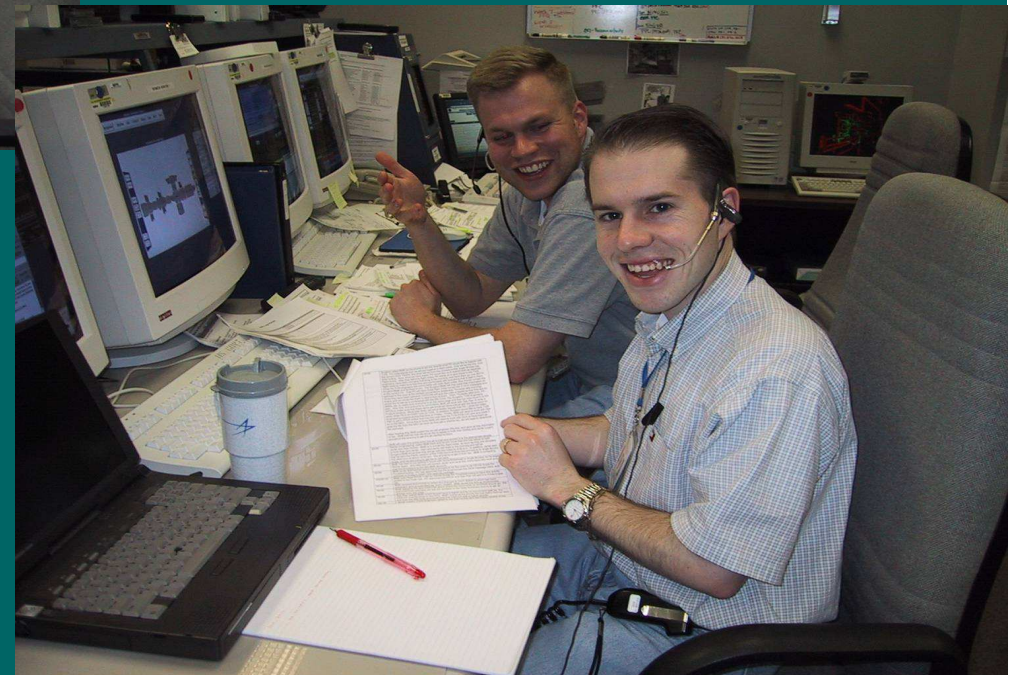

Introduction

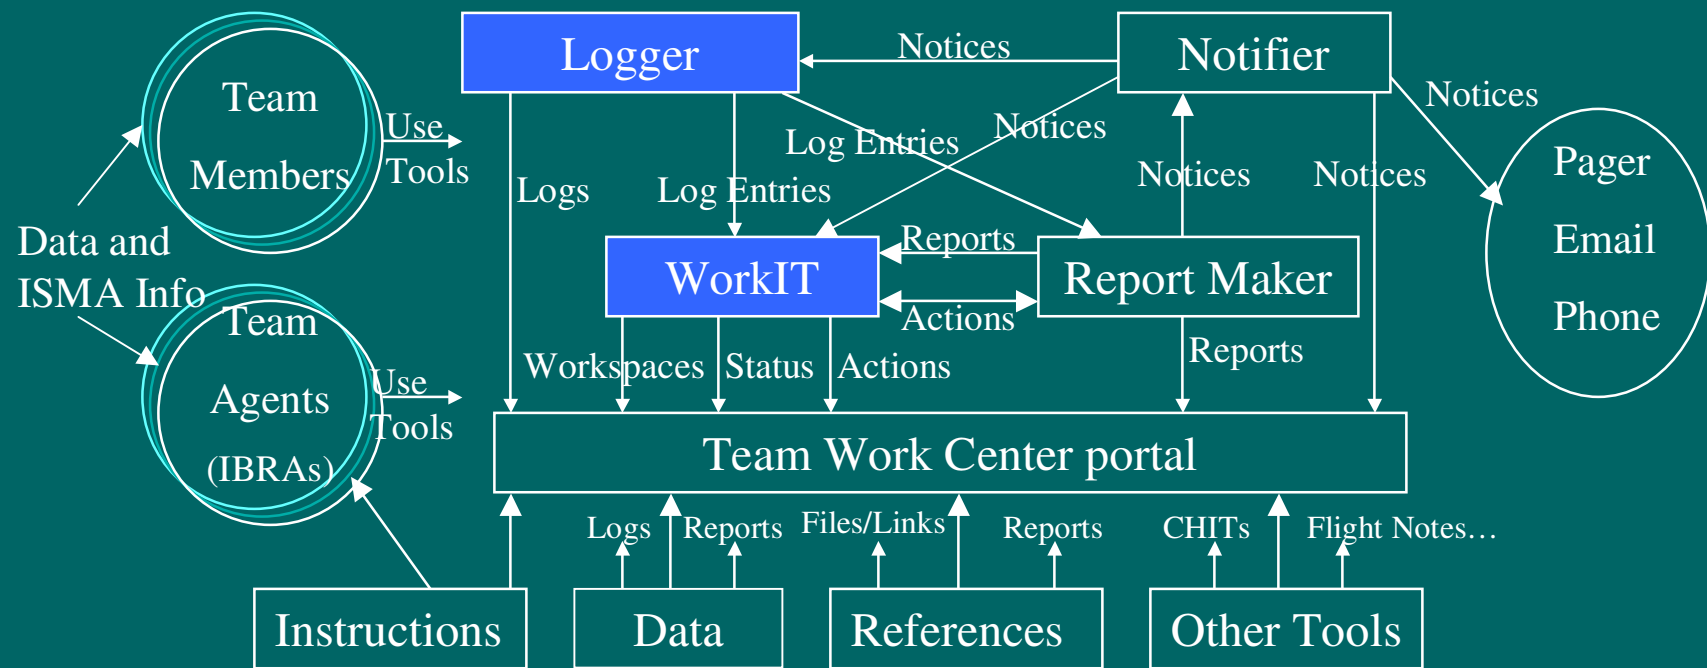

- The Biomedical Engineer's console is situated in a complex environment
 - Multiple agents and artifacts distributed across space and time
 - Collection of information is difficult to retrieve

BMEs responsible for

- the technical and operational support of medical events
- continuous logging and archiving of events generated throughout the BMEs' shifts

Linked Tools for Agents and Team Members

A team member enters content once, for use in multiple places

Human-Computer Interaction in Information Design

User Analysis: identify cognitive characteristics of existing and potential users, such as expertise and skills, knowledge base, age, education, cognitive capacities and

Distributed User Analysis: analyze division of labor.

Task Analysis: identify system functions that have to be performed; procedures and actions to be performed; information to be presented; static and dynamic patterns and dynamic

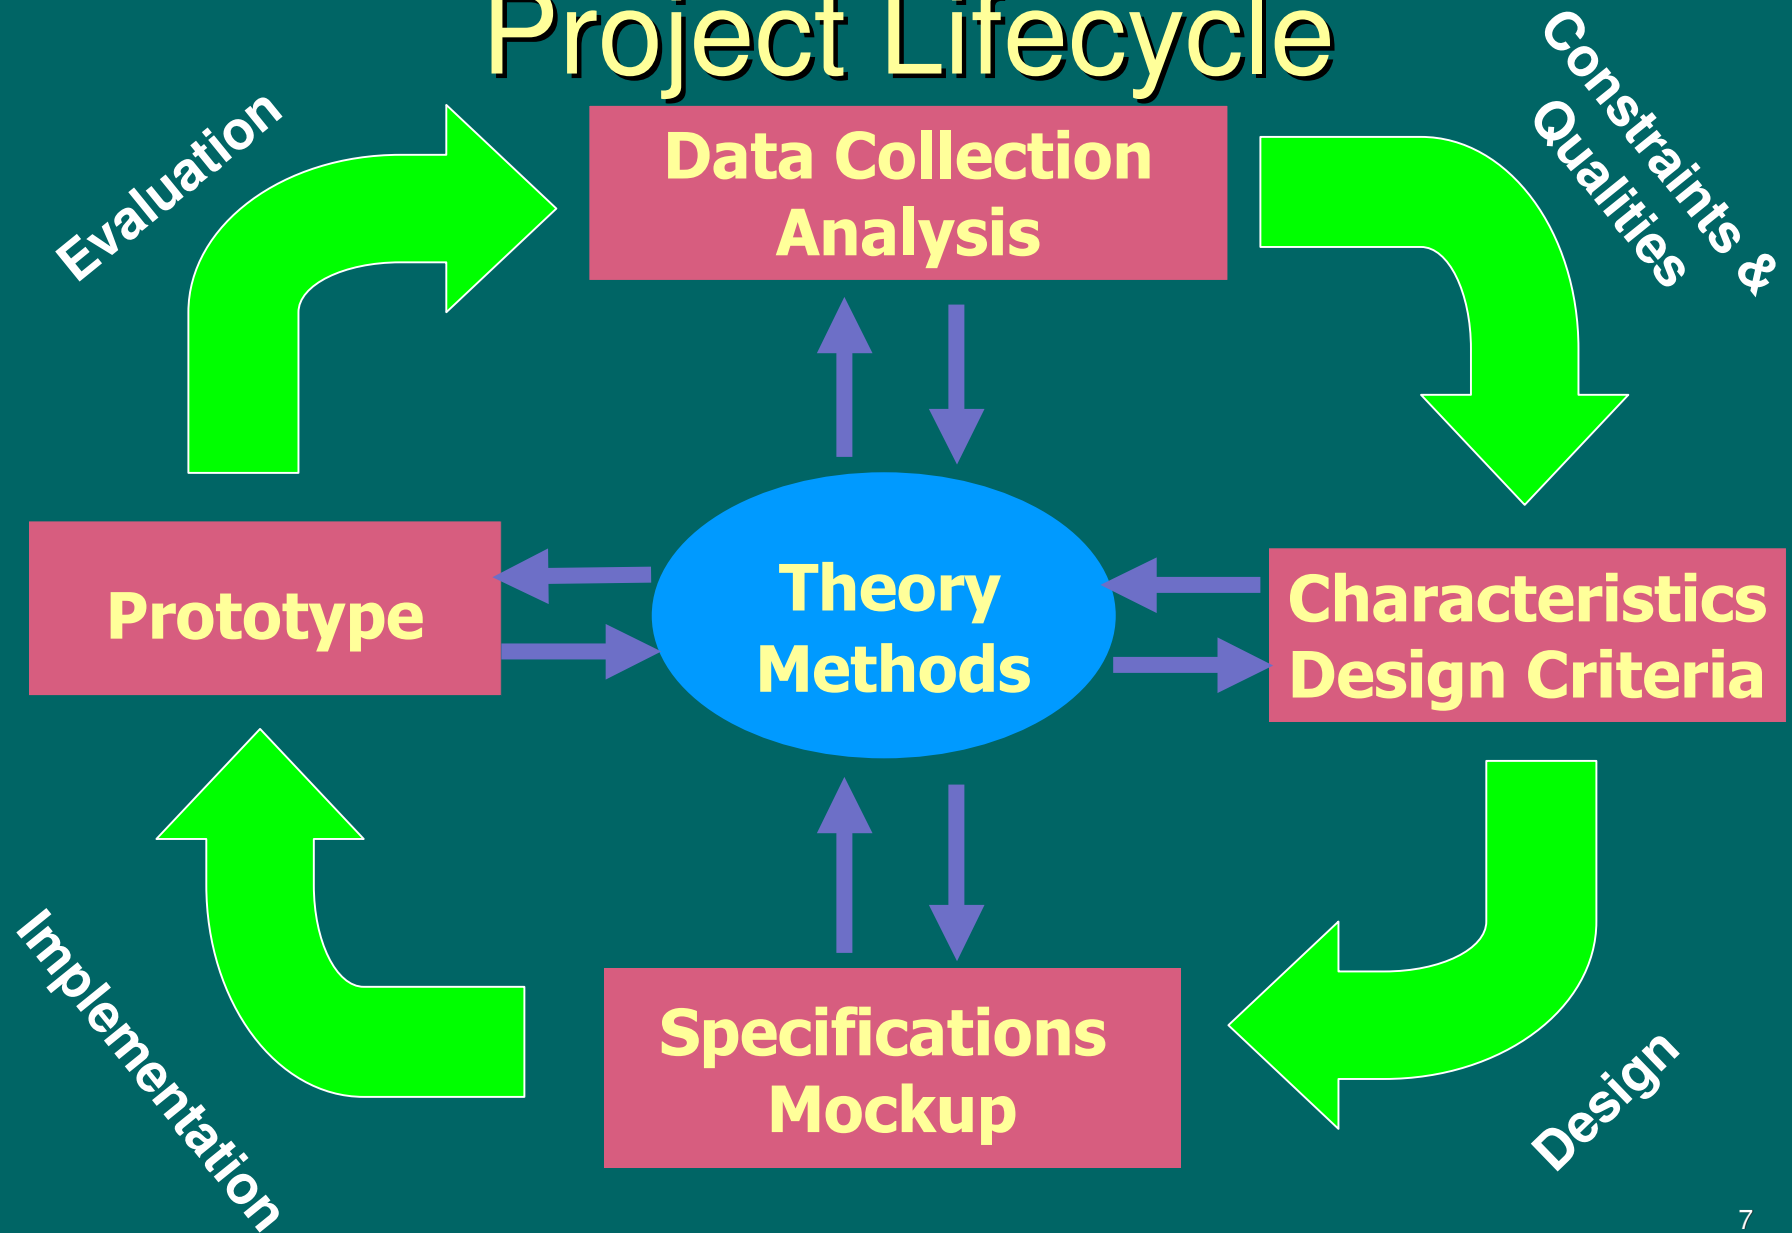

Distributed Task Analysis: analyze division of labor over time

Representational Design: determine the best information representation and the best information structure for a given task; the interaction between the systems is in a direct interaction mode.

Contents for System Implementation:

Functional Abstraction Hierarchy; user profiles; hierarchical task structure; information flow diagrams; task-specific, event-related, and context-sensitive information displays; interface design recommendations; and so on.

Implement

Search Interface

- An adequate search interface can reduce cognitive work load.
- Related menus allow selection at every level of hierarchy
- One menu controls the contents of the others
- Well developed coding scheme increases the accuracy of search

The screenshot displays the 'Log Search Page' with a NASA logo. It features two main search methods: text entry and menu selection. The text entry method includes dropdowns for 'Log Date' (set to 'All') and 'BME Name' (set to 'Tara Williams'), followed by a 'Search by entering text' section with a 'Enter Keywords' field and 'Search' and 'Reset' buttons. The menu selection method, separated by an 'OR' label, consists of three cascading menus: 'Choose a subject' (with options: Device, Paperwork, Conference, COMM), 'Choose a topic' (with options: CEVIS, CSA-CP, HRM, RED, TEPC, TVIS, VOA, Sample), and 'Choose a submenu' (with options: TEPC call down, TEPC data dump). Each menu has a 'Search' button below it, and double arrows (==>) indicate the flow from one menu to the next.

New format and search results

Event_ID	Log_Date	Log_Time	BME_Name	Event
2	10/19/2001	5:09:00 AM	Tara Williams	Space Weather called: 10 meV protons possible through 15:00 UT on 19th. BME paged Steve Johnson.
3	10/19/2001	5:15:00 AM	Tara Williams	Steve Johnson returned page, with the location at which the ISS is now, it is not a concern right now.
4	10/19/2001	5:29:00 AM	Tara Williams	Steve Johnson is on his way in. He doesn't think that there is anything to worry about but he is not sure.
5	10/19/2001	5:58:00 AM	Tara Williams	The crew is in the Soyuz and all the hatches are closed. They are ready for the Soyuz.
6	10/19/2001	6:09:00 AM	Tara Williams	Steve Johnson in MCC.
7	10/19/2001	7:03:00 AM	Tara Williams	Steve J. > Surgeon: We may reach alarm levels at around 16:30 UT, but don't think so at this time.
8	10/19/2001	7:13:00 AM	Tara Williams	Crew > MCC-M: We were told not to change the scrubbing cartridges and now we have a problem.
9	10/19/2001	7:16:00 AM	Tara Williams	Per our FR 13.2.2-3 the NASA SMAC is 10mmHg for 1 & 24-hr exposure but when levels stabilize above 7.6 mmHg, measures must be taken to lower levels.
10	10/20/2001	7:20:00 AM	Tara Williams	FD > ECLSS: Do you have a portable CO2 removal system? ECLSS: Yes. FD: Can it be brought into Soyuz? ECLSS is looking.
11	10/20/2001	7:26:00 AM	Tara Williams	ECLSS > FD: Fan needs UOP so it cannot go into the Soyuz.
12	10/20/2001	7:30:00 AM	Tara Williams	CAPCOM > ECLSS: what is your estimate on the level it will be at at ingress? ECLSS: By my calculations it should be at 7.5 mmHg.
13	10/20/2001	7:32:00 AM	Tara Williams	CDM in LAB1D4_A2, all hatches are closed so there is no way they would go get it.
14	10/20/2001	7:41:00 AM	Tara Williams	Surgeon informed BME that the crew waived CO2 training...
15	10/20/2001	7:48:00 AM	Tara Williams	Conference, MCC-M > crew: How is CO2 now? Crew: A little bit lower than 5mmHg.
16	10/20/2001	7:55:00 AM	Tara Williams	Steve Johnson is leaving MCC. No Flight Note was required because we did not cross any flight parameters.
17	10/20/2001	8:34:00 AM	Tara Williams	ISO > BME: They are working on the stowage note for Tuesday and saw that we have TEPC Data D/L. The part numbers in the procedure don't match what is in the database. BME told them to go ahead and use what they have in the database. ISO also asked if the callout of the SM under hardware required still applied. BME explained that it was missed and should not still be in the procedure.
18	10/21/2001	8:41:00 AM	Tara Williams	BME sent an email to Rhonda and Mark about the TEPC procedure and requested that the Ops Team Lead fix the errors.
19	10/21/2001	9:15:00 AM	Tara Williams	SO called and requested that BME take a look at CIIN873 which contains the locations for our hardware for the TEPC Data D/L. She had some blanks and requested BME help.
20	10/21/2001	9:24:00 AM	Tara Williams	Crew is wearing their suits. They performed fit check and there are no problems. Volodya is in undocking altitude.
21	10/21/2001	9:31:00 AM	Tara Williams	ISS is in undocking altitude.
22	10/21/2001	9:38:00 AM	Tara Williams	MCC M > Crew: The medical group informed us that they stopped getting medical data from the Soyuz.
23	10/21/2001	9:40:00 AM	Tara Williams	MCC-M > Crew: OK we have FE-1 medical data but none from the CDR. Crew: you should have it.
24	10/21/2001	9:43:00 AM	Tara Williams	Space Weather called: Major Flare M5 at 09:41UT. BME paged Steve J.
25	10/22/2001	9:48:00 AM	Tara Williams	Steve Johnson called back, no action at this time.
26	10/22/2001	10:13:00 AM	Tara Williams	FD went around the room for GO for undocking.
27	10/22/2001	10:20:00 AM	Tara Williams	FD asked HSG to relay what the CO2 was at 2.205 at 9:05 GMT.
28	10/22/2001	10:48:00 AM	Tara Williams	Soyuz has separated from ISS.
29	10/22/2001	11:03:00 AM	Tara Williams	Jodi Waks in MPSR.
30	10/22/2001	11:10:00 AM	Tara Williams	Soyuz id docked.
31	10/22/2001	11:51:00 AM	Tara Williams	BME spoke with ISO about the TEPC Data D/L. BME looked at the CheCS hardware on-orbit list from engineering (I placed a copy in the Expedition 3 Book) and part numbers do not match what is in the TEPC procedure. BME also looked at the IMS Database and the part numbers in there did not match what was in the procedure either (there was more info in the database on TEPC stuff than in the on-orbit list). Anyhow, BME and ISO discussed which cables should be installed on the MEC and BME thinks that it should be the power and the power/data cable that are installed on the MEC. ISO would like to know to update it in the database. Please see email in bmeiss account and respond to ISO.
32	10/22/2001	12:00:00 PM	Jodi Waks	Waks on console. Williams out of MPSR. (FD: Jeff Hanley, CC: Ginger Kerrick)
33	10/22/2001	12:02:00 PM	Jodi Waks	Surgeon going to planning meeting.
34	10/22/2001	1:19:00 PM	Jodi Waks	Look at OCA 715 0800 report and go green when happy. BME went green.
35	10/22/2001	1:52:00 PM	Jodi Waks	Review 293 on O-292-297 and go green. BME checked all links and activities and went green.
36	10/22/2001	2:32:00 PM	Jodi Waks	SRAG on console.
37	10/22/2001	2:46:00 PM	Jodi Waks	BME emailed Al and Chris with the times for the PPC and PFC this weekend. Chris will be in the Soyuz.
38	10/22/2001	3:01:00 PM	Jodi Waks	SVL called and BME relayed 12:36 local. SVL relayed that Chris may prefer video. We have a video of the Soyuz.
39	10/23/2001	3:05:00 PM	Jodi Waks	Review 294 and go green. BME looked at Sunday, PFC and PPC are good.
40	10/23/2001	3:11:00 PM	Jodi Waks	LRP called Surgeon about Reflotron. For next week all 6 CM are going to have blood taken.
41	10/23/2001	3:11:00 PM	Jodi Waks	Also from the planning meeting this morning. Arena would like the Russian's TVIS information.
42	10/23/2001	3:14:00 PM	Jodi Waks	Chris Flynn will be the Surgeon on call this weekend.
43	10/23/2001	3:21:00 PM	Jodi Waks	BME talked to Alan and he said the on-orbit list only has assembly level information, meaning it doesn't have the part numbers.
44	10/23/2001	3:31:00 PM	Jodi Waks	BME talked to Howard Better about the TEPC part numbers. Howard looks at the drawings and finds the part numbers.

Brahms Modeling

Brahms Project: Objective

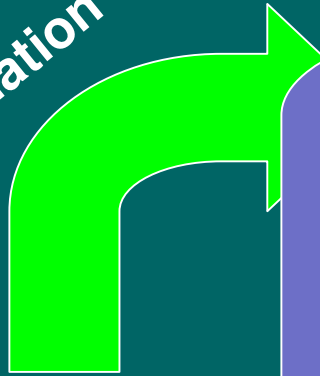

- Part of Analysis/Data Collection phase
- Apply Brahms as a model-based approach to
 - understand the complex human-computer social dynamics that exist within the BME domain
 - Identify design constraints
- Investigate potential benefits of Brahms for further analyses in SMART

Brahms

Project Lifecycle

Const

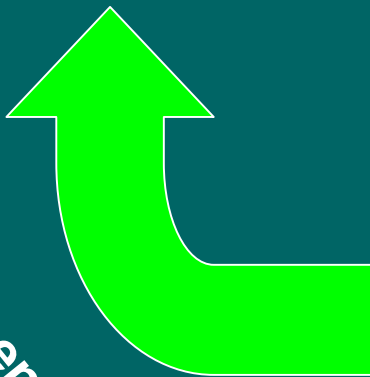

Evaluation

Prototype

Evaluate Brahms as a tool to model and simulate BMEs' work practices to identify constraints and design criteria for human-centered system design

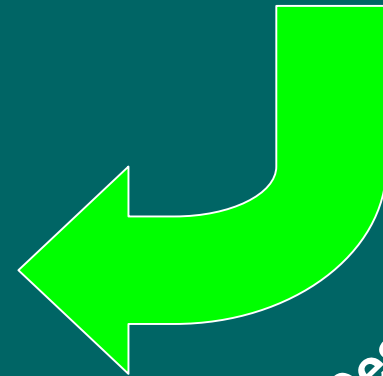

Implementation

**Specifications
Mockup**

Design

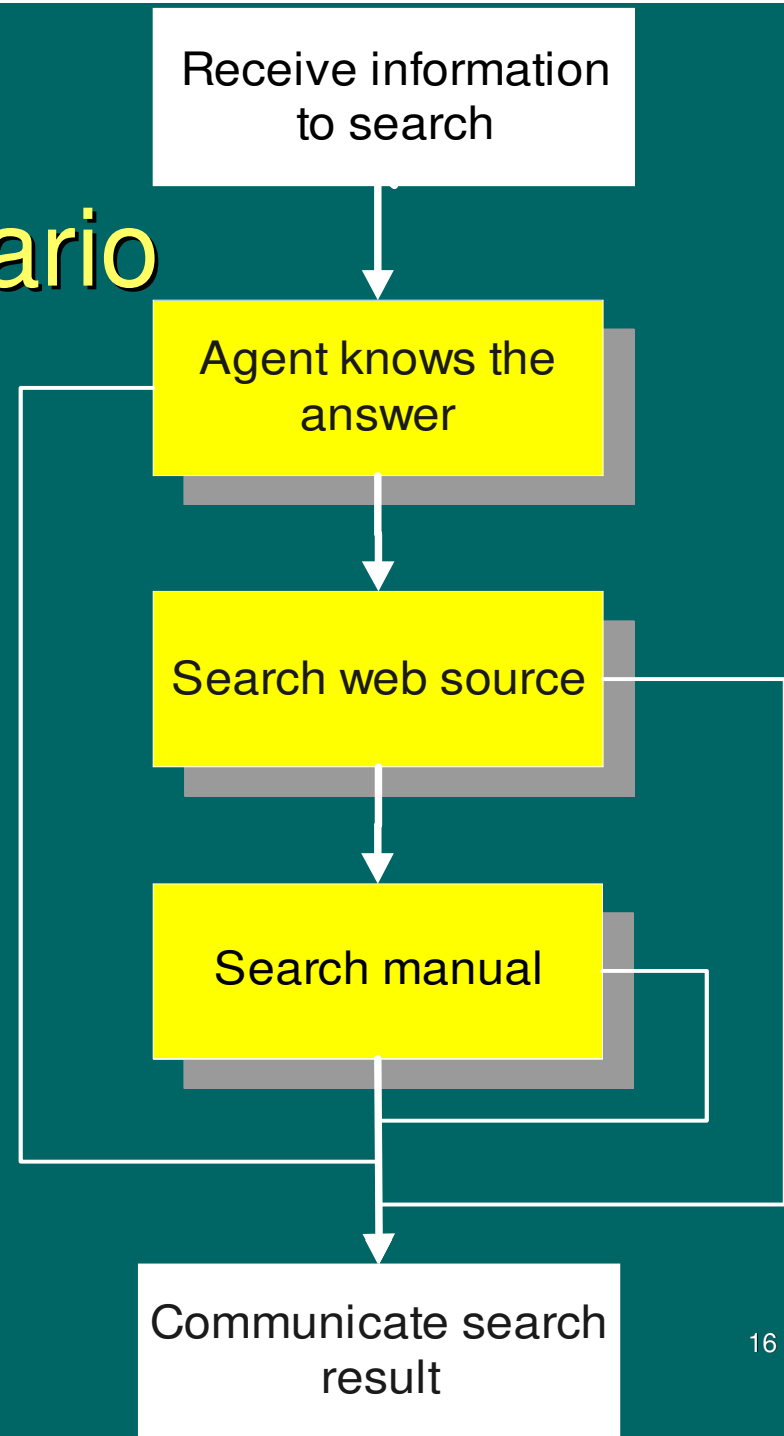

Brahms Project Methodology

- Work practice operational methodology:
 - Observed and analyzed the work practice of BME utilizing knowledge resources
 - Created formal models of work practice
 - Compiled and simulated the work practice
 - Observed the simulation

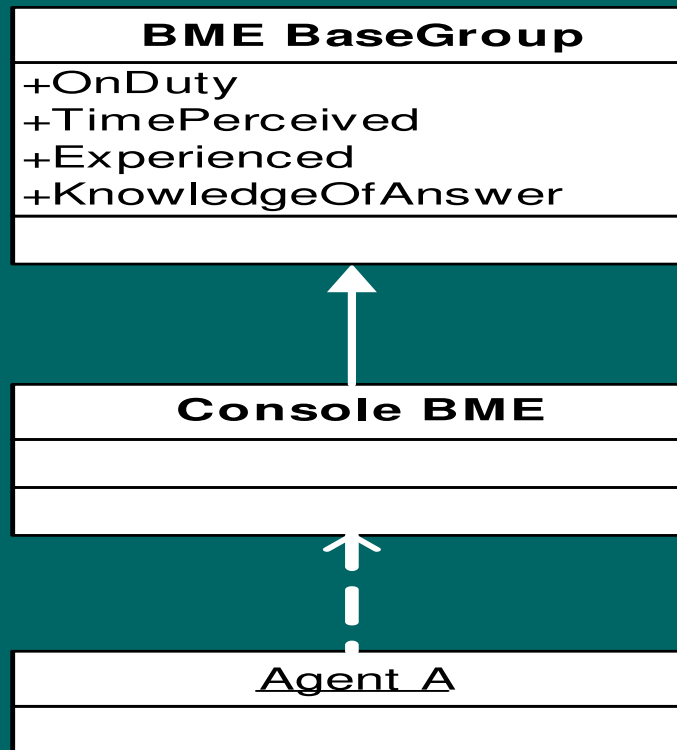

Brahms Project: Simulation Scenario

➤ BME's Issue handling activity

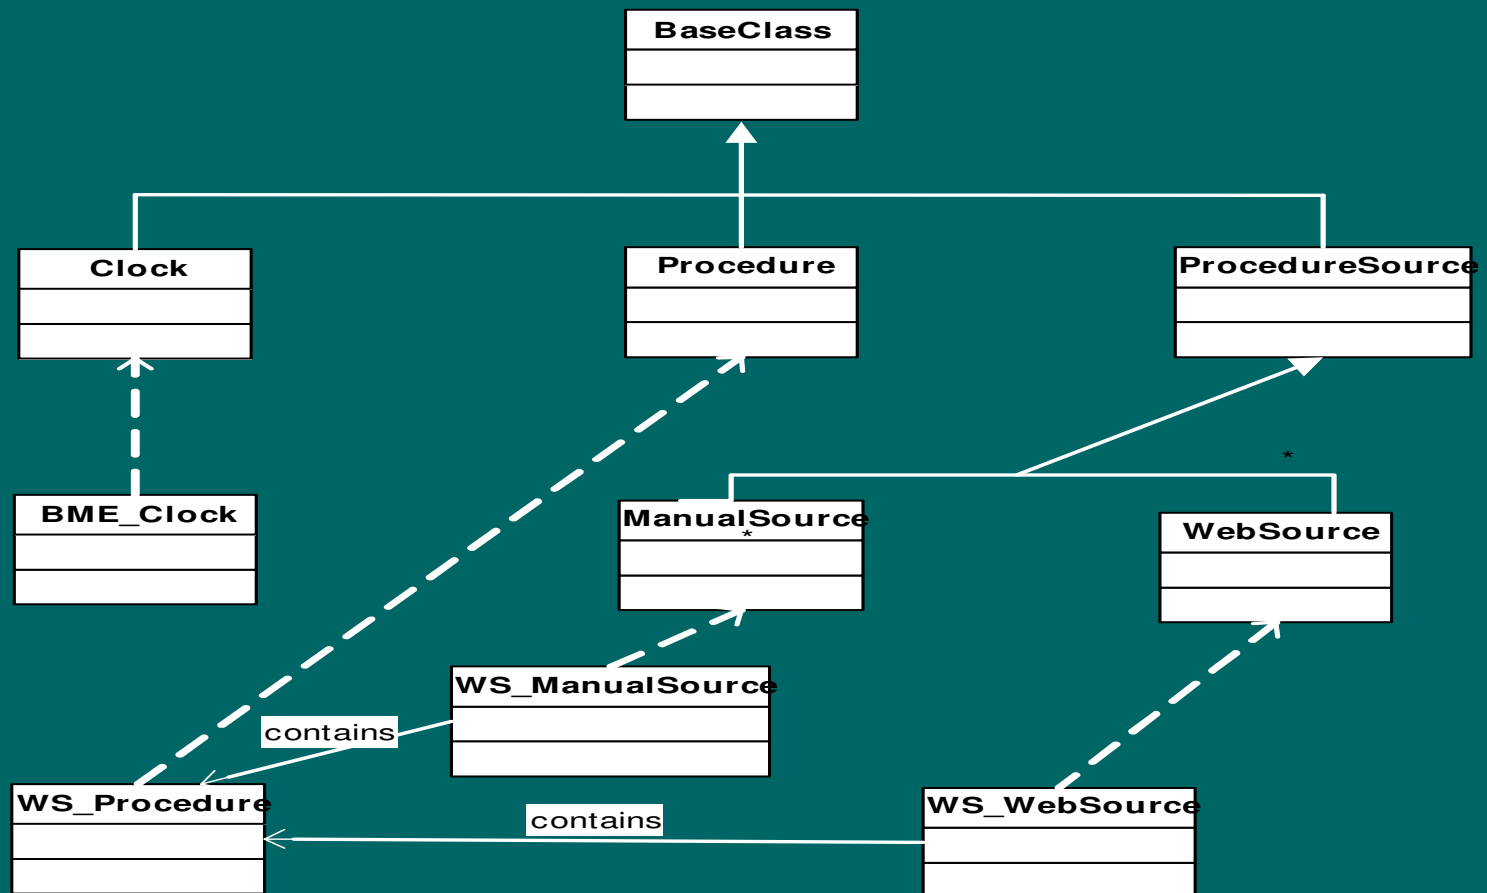

- BME is asked to find the water sampling procedure.
- If BME is unable to recall the procedure from memory, then he searches the web for an online document.
- If BME does not find it online, then BME searches the manual on the bookshelf.

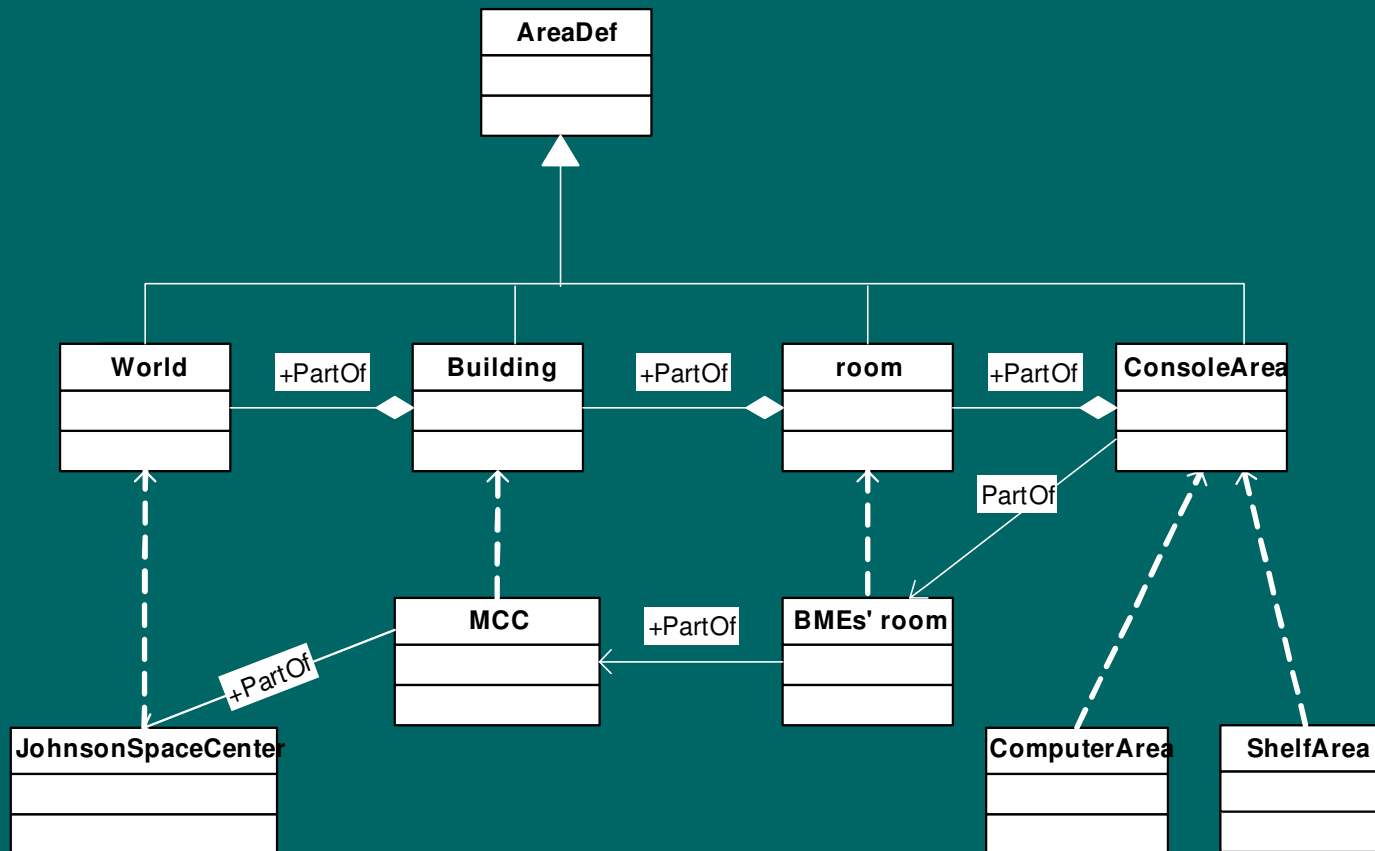

Agent Model Design

Object Model Design

Geography Model Design

Agent Viewer Screenshot

The screenshot displays the Brahms Agent Viewer 1.3.1 interface. The main window shows a timeline of activities for the agent 'ConsoleBME_Agent'. The timeline is divided into sections for different locations: ComputerArea, ShelfArea, and ComputerArea. Each section contains a list of activities with their start and end times. Annotations point to various elements:

- Location:** Points to the 'ShelfArea' label in the timeline header.
- Time Line:** Points to the timeline header showing dates and times.
- Composite Activity:** Points to the 'wf: wf_inexperiencedSearch' activity.
- Workframe:** Points to the 'ca: ca_inexperiencedSearch' activity.
- Activity Context Tree:** Points to the 'wf: wf_searchManual_1' activity.
- Communication:** Points to the 'pa: searchOnline' activity.
- Tool Tip:** Points to the 'If timeAndExperience' tooltip.
- Primitive Activity:** Points to the 'pa: searchManual' activity.
- Agent/Object Tree View:** Points to the left sidebar showing the hierarchy of agents, groups, classes, and locations.
- Selected Workframe:** Points to the 'wf: wf_inexperiencedSearch' activity in the 'Explanation Facility' pane.
- Activity Time:** Points to the 'Total Active Time: 3010 - (50 minutes and 10 seconds)' in the 'Explanation Facility' pane.
- Workframe Body:** Points to the 'Name and Context Type' section in the 'Explanation Facility' pane.
- Selected Activity:** Points to the 'ca: ca_inexperiencedSearch' activity in the 'Explanation Facility' pane.

The 'Explanation Facility' pane at the bottom provides details for the selected activity, including the frame name, agent name, and a list of activities with their context types.

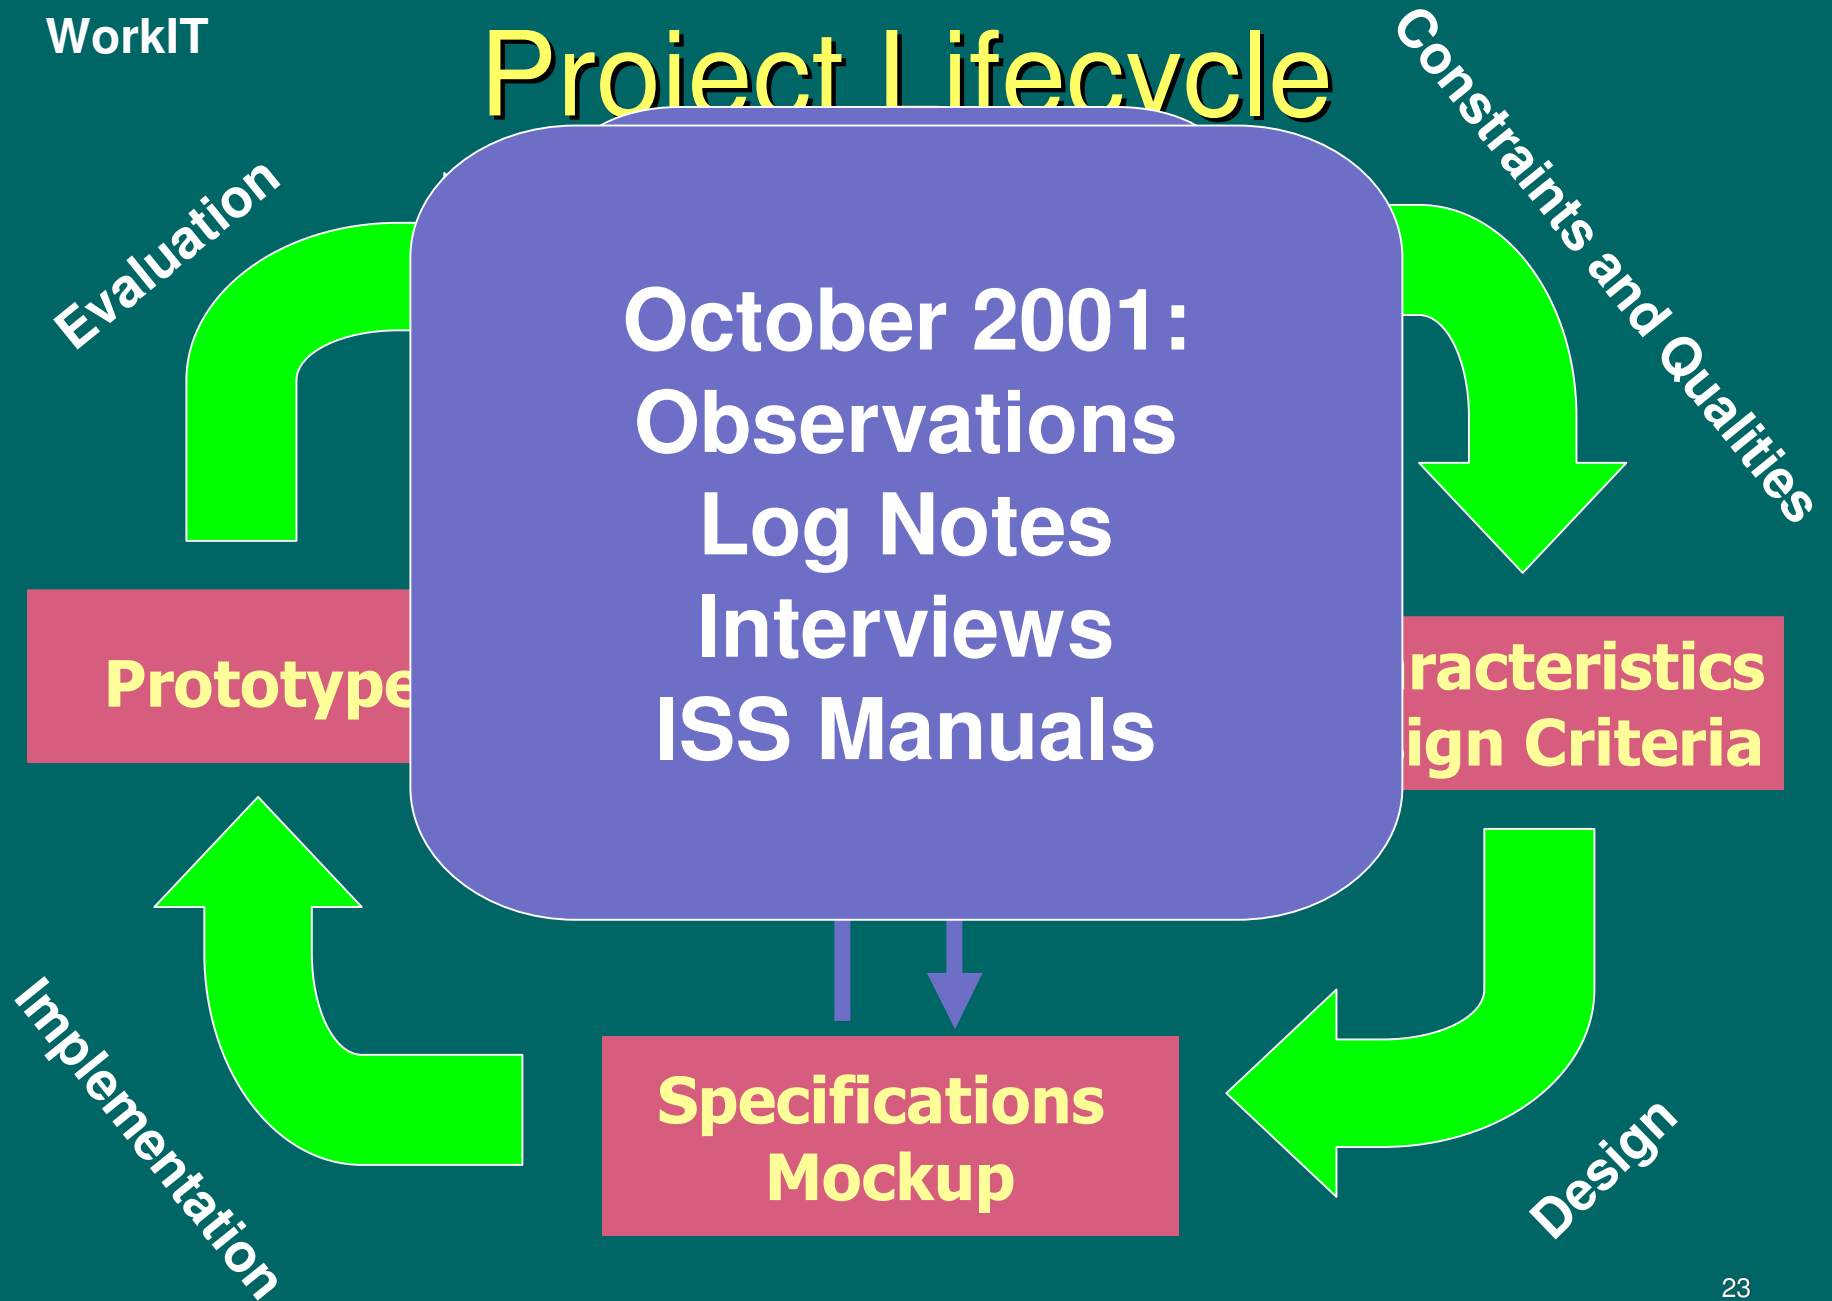

Brahms Project: Summary

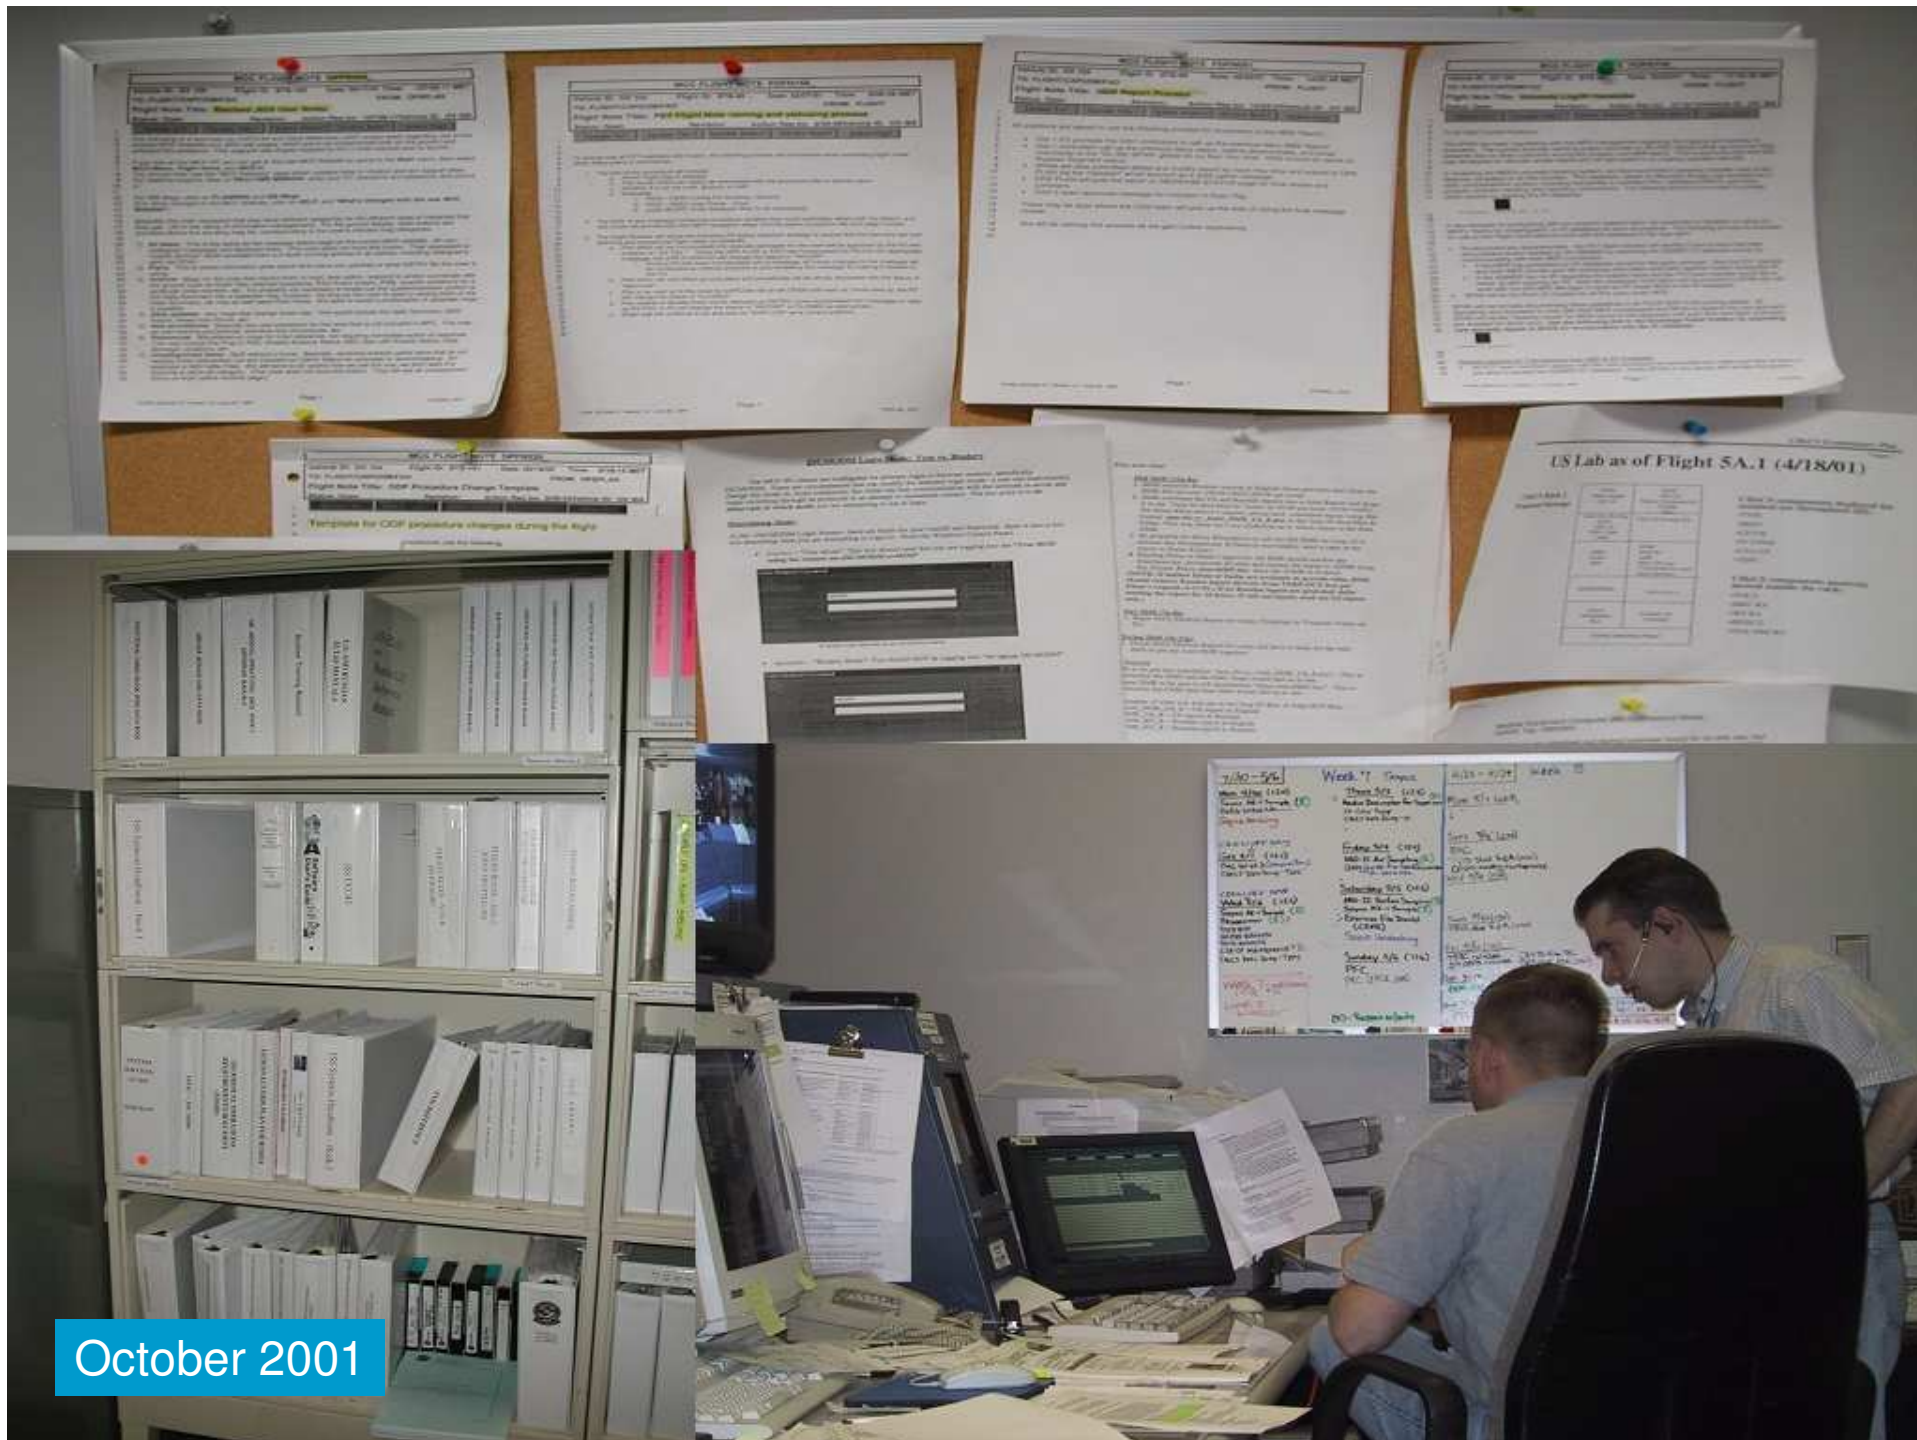

- A higher level of analysis may be more applicable for this investigation
- Time/cost benefit analysis revealed modeling is not cost-effective for domains where constraints can be inferred directly and time/resources investment is relatively small
- Brahms will probably be very useful in situations where subtle and complex interactions may be undetected within the system
- Brahms modeling process leads to a deeper understanding of the complex environment

WorkIT

Project Lifecycle

Cons

Constraints and Qualities

Organizational Memory

- Informal knowledge not adequately captured
- Formal knowledge not framed within context
- Limited successful searchability of information

Problem Solving

- Requires the interaction and exchange of information across multiple agents distributed across time and space dimensions
- Contingent upon receiving information from multiple sources
- Involves multiple sub-issues nested within a main issue
- Repeated problem solving for routine tasks

Constraints and Qualities

Communication

- BME's function as an “information relay station”
- Information is relayed across various mediums
- Minimal information shared across the groups
- Significant number of the group uniformed
- Most frequent communication pattern is one-to-one to a large distributed group

Work Environment

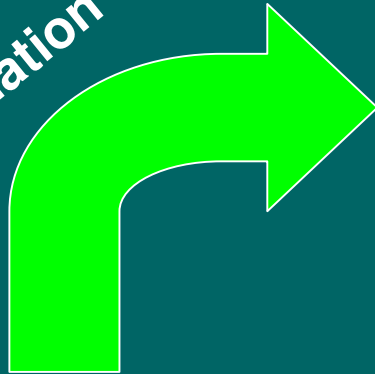

- Numerous interactions requiring a high-level of multi-tasking
- Highly interruption-oriented work environment

WorkIT

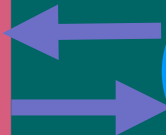

Project Lifecycle

Des

TEPC Issues Identified

BMEs thought that a similar problem had occurred previously with TEPC but they were uncertain about the nature of the problem, and who, how or if the problem was resolved

Characteristics of Design Criteria

- Capture informal knowledge
- Frame formal knowledge within context
- Increase information sharing across groups
- Minimize repeated problem solving with routine tasks
- Increase search and retrieval capabilities

Comments Log:

Requirements Communication

- Use Screen Shots/Sketches
- Revision made sure to include URL address (indicating page and parameters)
- Items numbered and linked to locations on the page
- Developer then turned these into his own ToDo list – more emphasis on the implications for the implementation

Developer's ToDo List

16-27-02 complicated OR

To Do List

OR Hard Stuff

- ① Create new filters for all places where Actions are listed.
Filter On: All, OPEN/IN WORK, CLOSED, Assigned to Me, POC is me
next delegation rev3?
- ② Create new filters for all pages where Workspaces are listed.
To Do Filter: All, OPEN/IN WORK, CLOSED.
- ③ Selected filter on above requirements is red and non-clickable.
To Do this will require custom behaviour for Explorer.
same as for other filters?
- ④ All titles stay blue when selected and loose underlines.
-again this will require custom behavior for the links.
- ⑤ Add new "Modify Action" column with link to Modify Action page from all Action lists.
To Do
- ⑥ Add Sort on "Assigned To" columns of all Action screens
rev3?
adding

Use of WorkIT for Design

- Track documentation (design requirements, artifacts, etc.)
- Track actions

Status Log

10/25/01 On 10/24/01, the crew notified the ground that the TEPC data download to the MEC was interrupted/unsuccessful. The ground will downlink the partial data file to the ground for assessment.

Tasks Log

[10/25/01 by kjohnson] ; BME downlink file stored on MEC Due: 10/25/01

[10/25/01 by kjohnson] ; Engineering assess downlinked file and provide assessment Due: 01/02/02

[01/04/02 by kjohnson] ; Engineering search hard disk of

Main Changes in Prototype

- Changed navigation
 - No left menu bar
 - Bread crumbs at top
- Search
 - Additional search functionality
- Task and Status Log Addition
 - Identified as key element to enable functionality already available for BME's

Conclusions

- Framework has been successfully applied to the development of products
- With proper tracking of intermediate results, the project lifecycle is able to be simultaneously used in all stages
- Methods for iterative evaluation and design are evolving into very useful tools
- Empirical studies identified problems that were addressed in the design and implementation of tools

Next Steps

- Evaluate WorkIT, Logger, Report Maker, Team Work Center
- Migrate tools to a production environment
- Continue observation and evaluation
- Refine methods
- Refine tools

List of Publications & Presentations

● Publications
